Acknowledgement

Veterinary Drug and Animal Feed Administration and Control Authority of Ethiopia (VDFACA) would like to extend its gratitude to the IFC/World Bank Group and Food and Agriculture Organization of United Nations for their technical assistance, covering all financial expenses of the review process of the Ethiopian Veterinary Drugs List. The authority also appreciates the technical review committee and technical working experts for their invaluable efforts in reviewing, compilation and finalizing of this edition. The Authority would also like to give special acknowledgement to all participants of the validation workshop for their helpful comments and inputs.

Foreword

Veterinary drugs are essential in animal health practice. For the successful animal health care, the drugs should be available and are safe, effective, and in the required quality. In addition to their accessibility, they should also be prescribed, dispensed and used rationally. Preparing a list of veterinary drugs for the country, structure the drugs in the list into different categories, and revising the list whenever necessary is among the mandates given to Veterinary Drugs and Animal Feed Administration and Control Authority according to article 20(4) of veterinary drugs and feed administration and control proclamation 728/2011. Guided with this mandate this veterinary drug list is revised with wide consultation and discussions made with professionals in veterinary practice, research and academia, veterinary pharmaceutical trade sector and other related fields. This second edition is believed to solve the gaps we were facing during market authorization due to limited list of drugs on the first edition. It is also hoped to serve as a useful guide to develop other regulatory guides and manuals; and for procurement, distribution and prescription of veterinary drugs in the country.

Finally, I would like to express my gratitude to the development partners and professional experts who have directly or indirectly extended their helping hands in the revision of the list. And moreover, I want to remind all field veterinary professionals and animal owners to give more attention to prevention and control of illegal trade and distribution of veterinary drugs and to rational utilization and good handling of veterinary drugs to minimize development of drug resistance which play a negative role on animal health, production and productivity and on the health of animal product consumers. I also call upon all animal health professionals and other interested parties to forward their inputs for continuous development and revision of the list.

Terzu Daya Degaga (Dr.)

Director General, Veterinary Drug and Animal Feed Administration and Control Authority of Ethiopia

Introduction

The provision of adequate animal health care requires (in part) the availability of safe, effective and affordable drugs of the required quality, in an adequate quantity at all times. The available drugs must also be presented, dispensed and used rationally. Some countries list veterinary drugs to be used in veterinary service within their specific market based on the animal diseases prevalent in the country, trained manpower, the economic capacity of the country and users, and veterinary infrastructures.

The National Veterinary Drug List (NVDL), which was in use in the country, is obsolete. Due to the limited number of drugs in the list, VDFACA was not able to authorize a number of product registration applications. Irrational use of available drugs, drug resistance, and residue problems are also common challenges in the country. So, this document needs to be updated to ensure the availability and rational use of veterinary drugs. Improving the national drug list will help to increase the choices of livestock keepers for effective drugs which are at the moment reported to be in dearth. It will also help to minimize the type of drugs which are rejected by the users because some of the pathogens have already developed resistances against it or it is posing safety problems and is banned or restricted from the international market.

Now, VDFACA, with the assistance of the International Finance Corporation (IFC/World Bank Group) and the Food and Agricultural Organization of the United Nations (FAO), was engaged in the revision of the national veterinary drug list, which has been in use for the last 16 years in the country. To undertake this assignment, VDFACA has established a technical review committee drawn from public and private organizations, Research and Academia. The committee was spearheading the drug updating process, under the leadership of the drug registration and certification directorate of VDFACA. The United Kingdom Veterinary Medicine Directorate (UK-VMD) has also come on board with the assistance of IFC. This institution provided cutting edge knowledge on veterinary drugs and on international experiences with regard to the drug business.

This new edition has a total of 429 veterinary drugs. 153 new chemical entities are added, while twenty one (21) drugs are deleted from the previous list because of their low benefit to risk ratio. This new edition included a list of sixty (60) vaccines, which can solve the growing need for vaccines in the livestock industry.

In general, this list will help the authority in market authorization of medicines, improve the access and quality of veterinary drugs in the market, serve as a useful guide for procurement, distribution, prescription, dispensing and use of drugs in the country and help to develop other supporting guides and manuals essential for rational use of drugs and improve veterinary practice.
